## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Higashiguchi (US Patent 4,243,470) in view of Lyijynen (US Patent 2,543,582).

Higashiguchi discloses a device for applying designs to clothing articles. As shown in Fig. 1, the device comprises base 1, standard 2, heat plate 3, handle 4, arm 5 and holding plate 7.

However, Higashiguchi does not disclose the workpiece supporting boards as claimed by the applicant. Regarding this difference, the applicant is directed to the reference of Lyijynen.

Lyijynen discloses a press construction. As shown in Fig. 1, the press comprises lower jaw 20, upper jaw member 32 and vertically movable platens 60a-f (applicant's claimed workpiece supporting board) for receiving and supporting individual articles during the press operation.

It would have been obvious to one having ordinary skill in the art to employ workpiece supporting boards, as taught by Lyijynen, in the apparatus of Higashiguchi in order to facilitate positioning of the articles to be pressed. In addition, without the disclosure of unexpected results, it is the examiner's position that the carrier

sleeve/spring, detachable connection, locator pins and key slots are well known and conventional in the art and would have been obvious to employ in the device of Higashiguchi described above based on the physical requirements of the system.
